

NOTICE OF COMPLETION

ENVIRONMENTAL REVIEW COMPLETION FOR THE PROPOSED UPGRADE OF THE ST. CLAIR ENERGY CENTRE

THE PROJECT

With electricity demands in Southern Ontario anticipating to grow significantly over the next several years, St. Clair Energy Centre, owned and operated by St. Clair Power, L.P., an affiliate of Invenergy, is proposing to expand the nameplate capacity of the existing facility located in St. Clair Township, Ontario. Invenergy is a leading privately held, global developer and operator of sustainable energy solutions.

At this time, the proposed upgrade to the facility will involve increasing plant capacity through process improvements and equipment upgrades, requiring no physical expansion of the plant. This upgrade results in approximately an additional 70 megawatts (MW) of generating capacity.

THE PROCESS

The Project Upgrade Environmental Review Report (ERR) was completed in accordance with the Ministry of Environment, Conservation, and Parks (MECP) Environmental Review requirements as set out in Ontario Regulation 116/01 (Electricity Projects Regulation). The upgrade to the St. Clair Energy Centre is considered a Category B project under O.Reg. 116/01 and is subject to the Environmental Screening Process for electricity projects. *The Guide to Environmental Assessment Requirements for Electricity Projects* (the “Guide”) issued by the Ontario Government pursuant to the *Environmental Assessment Act* ensures that an ERR is prepared as part of this process and identifies the potential authorizations required. The ERR also provides an assessment of potential effects and proposes mitigation measures for the construction and operation of the facility.

This notice signals the completion of the Environmental Review for this project. The ERR is available for review at the **Royal Canadian Legion Branch 447 (350 Albert St, Corunna, ON)** and the **Corunna Library (417 Lyndoch St, Corunna, ON)** and will also be posted on the Project Website, www.stclaireenergycentre.com beginning **July 18, 2023**, and be available for 30 days ending **August 17, 2023**.

In accordance with the Guide, concerns should be raised with Invenergy first. If the concerns cannot be resolved within the review period, the concerned party may make a written request to the Director of Environmental Assessment Branch, MECP to elevate the project to either an Environmental Review or to an individual EA. A copy of the elevation request must be sent to Invenergy. Elevation requests must be made in accordance with the provisions set out in the MECP Environmental Screening Process for electricity projects.

COMMENTS AND CONTACTS

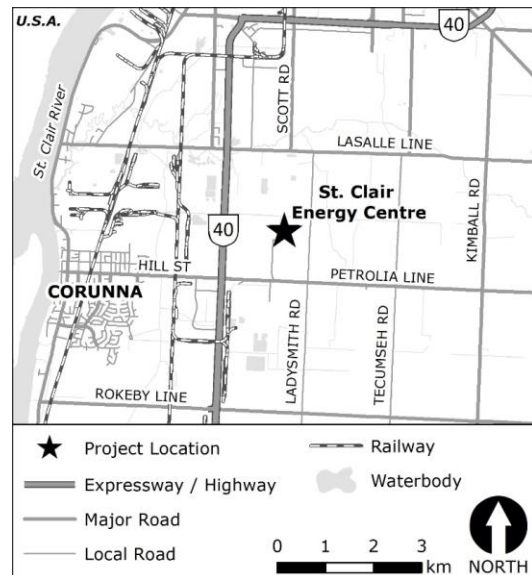

Interested persons may provide written comments to the project contacts listed below by **August 17, 2023**. If you require alternative accommodations to view the document, please contact the project team members listed below:
